

WebView

Web Based Case Sharing

WebView is a web based application that allows cytogeneticists and pathologists to review, respond and remotely analyze cases that are securely shared over the internet.

WebView enables remote review and analysis of cases, captured with all ASI CytoLabView applications; Karyotyping, FISH, CGH, SKY, and Pathex, Pathology applications. It is easy to use, quick to deploy, simple to manage and does not require any special knowledge due to its clear, intuitive interface. It is a secure way to share cases and images across the internet. WebView provides easy and secure remote file access and management 24 hours a day using a simple internet browser.

Remotely Review & Approve Analyzed Cases

- Review analysis from any remote site without the need of additional applications
- Easy set up for remote satellite labs
- Provides flexible working conditions
- Reduces turn around time for case sign-off and completion

Perform Full Analysis

- Ability to download case information and images from the WebView site to your PC for analysis with ASI's applications
- Fast upload of changes and swift return to sender

Update Case Review

- E-mail notification of completion sent to sender
- Reviewed and analyzed cases imported back to Case Data Manager– ASI's dynamic database

Security and Confidentiality

- Ability to transfer cases and images with or without patient demographics to protect patient confidentiality
- Ability to see only cases sent to you or to your group providing secure access
